

# CS-622 Advanced Programming Techniques

## Assignment 4

Student: Michael Kramer

Term: Spring 1, 2022

Facilitator: Ed Orsini [edorsini@bu.edu](mailto:edorsini@bu.edu)

Grade: 98/100

Please find below my feedback.

### README File

Great job with the README file.

### Comments (file/method/inline)

Great job with comments and function header comments. Very clean and organized.

### JUnit

Great job.

## Diagrams

Great job.

## General

A general rule of thumb is to remove code that is not used or code that is commented out. The more code we have means that the more code we have to manage. A higher number of lines of code sometimes bloats our application and has more potential to introduce bugs. I understand that you may anticipate using it later, but just throwing it out there for you to consider.
